Subject: Nose bolt with O-Ring

Reason: We learnt of incidents, mainly with aircraft other than Schleicher types, where pilots have flown either without the horizontal stab nose bolt fitted or with the nose bolt wrongly fitted. These incidents cause us to incorporate an O-ring into this nose bolt so that it can no more be removed from the stabilizer leading edge and protrudes visibly if not screwed in. This feature has already successfully been incorporated into the ASW 27.
Action: In accordance with drawing 000.33.9001, Sheet 1 drill a hole into the nose fitting at the stabilizer underside and ream. As shown on Sheet 2 a groove must be milled into the nose bolt for the O-ring; afterwards the bolt must be protected against corrosion by using a suitable surface treatment (see Drawing 000.33.9001, Sheet 2). Then insert the nose bolt into the nose fitting of the horizontal stabilizer and fit the O-ring into the groove of the nose bolt. For this purpose the O-ring should be greased, e.g. with Vaseline.

Where applicable this Technical Note must inserted as Appendix into the respective aircraft's Flight and Operations Manual (Flight and Maintenance Manual respectively) and the corresponding entry on this action must be made into the relevant "Record of Revision", or "Amendments Record", or "Index of Corrections" of the manual in question.

Material and drawings: Drawing 000.33.9001, Sheet 1, Nose fitting for bolt with O-ring in the horizontal tail
Drawing 000.33.9001, Sheet 2, Nose bolt with O-ring for horizontal tail

Notes: This action can be accomplished by a competent person. The accomplishment of this mod must be checked & certified by a licensed aviation inspector in the aircraft's log-book; Flight and Operations /Maintenance Manual and in the inspection documents.
